

# Did you know...

## A DNA ancestry test isn't the same as carrier screening.

Some popular DNA ancestry tests also offer carrier screening, but can you rely on their results for family planning?

- How many genetic conditions do they screen for? We've partnered with JScreen, which tests for more than 200 conditions — including diseases common in Ashkenazi, Mizrahi, Sephardic and Persian Jews, as well as across other ethnic groups.
- Screening includes a consultation with a genetic counselor so you can better understand your results.
- New diseases are continually added to the panel as technology advances.
